

Aug 8, 2022

To Whom it May Concern,

City Colleges of Chicago (CCC) is in the process of implementing the Modern Campus (MC) Destiny One product in support of its Continuing Education (CE) student enrollment process. This implementation was initiated in Q3 of 2021 and is targeted to go live in 2023.

In 2022, CCC made a business decision to migrate all student enrollment payment processing to a single provider. Nelnet was selected as the single source provider for all student enrollment payment processing. Additionally, Nelnet's Checkout Payment Processor product was identified as the closest fit for Destiny One. Unfortunately, as the product is new, it does not currently integrate into the Modern Campus Destiny One platform, leaving payment processing for CE students underserved. This resulted in a need for a connector be crafted to marry the two platforms in a manner satisfactory to CCC's processing requirements.

Given that Destiny One is a Modern Campus product and the code required to enhance the Destiny Connect Payment Processor Adaptor can only be accessed by Modern Campus staff for security and PCI/PA - DSS compliance, Modern Campus is the exclusive provider able to build and maintain this connector with NelNet.

This connector is essential to the successful implementation of Destiny One for use by CCC Continuing Education.

Thank you for your review, and we look forward to receiving Sole Source Approval.

Sincerely,

DocuSigned by:
