BOARD OF TRUSTEES OF COMMUNITY COLLEGE DISTRICT NO. 508
County of Cook and State of Illinois

WYCC Infrastructure (TV) Digitalization Conversion

THE CHANCELLOR

REPORTS

That there is a need to approve acceptance of the State of Illinois Infrastructure (TV) Digitalization Grant for the WYCC HDTV/DTV Conversion. The grant provides \$814,400 per year starting fiscal year 2001 and ending in fiscal year 2003. The total grant amount is \$2,443,200.

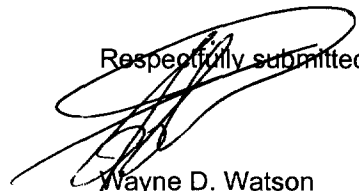

This grant will be utilized to purchase equipment in order to begin compliance with the FCC's mandate to transmit digital television format as given by the Advanced Television Systems Committee (ATSC), along with the current analog format National Television System Committee (NTSC), by May 1, 2003.

The entire cost of the digitalization compliance project is approximately \$12.6 million. Currently, other grants to complete this project are being researched.

RECOMMENDS

That the Board of Trustees approve the acceptance of the State of Illinois Infrastructure (TV) Digitalization Grant for the total amount of \$2,443,200.

Respectfully submitted:

Wayne D. Watson
Chancellor

WYCC HDTV / DTV CONVERSION

Prepared By: FLETCHER GARRETT, CSTE
& ED MENAKER

BACKGROUND

WYCC-TV, channel 20 in Chicago is a PBS station owned and operated by the City Colleges of Chicago (CCC). WYCC's signal, from atop the Hancock Building, is broadcast to ethnically diverse viewing audience of more than 3.4 million homes in the Chicago metro market and ultimately more than 6 million homes in the four state region of Illinois, Indiana, Wisconsin and Michigan. Our purpose for broadcasting is to deliver unique educational programs that enrich our viewers. In order to continue this endeavor, the station must comply with the FCC's mandate to transmit the new digital television format as given by the ATSC, along with the current analog format (NTSC), by May 1, 2003. Thus, by the 2003 deadline, WYCC must be transmitting DTV on channel 21 and a NTSC signal on Channel 20 simultaneously (until 2006, the designated NTSC cut off date). The FCC has said that any station that does not comply with this mandate will ultimately have their broadcast license revoked. It must be stated that the FCC created the mandate for the public's good. To the public, this new digital format will revolutionize the television experience as they have known it.

BENEFITS OF DIGITAL TELEVISION

Digital television will not only improve the entertainment value of the television, but it will also become a powerful medium that will inform and educate viewers. WYCC plans to utilize this technology to its fullest potential since our main objective is education. This task becomes much easier since the realistic images and sounds viewers receive are more vivid, and as such, have greater impact on their retention of viewed information. By using Digital television's ability to transmit data with the television signal, viewers will be able to access additional information on demand regarding subjects of interest via a printer that will be connected to the DTV home set. In addition, by using multicasting technology, which allows broadcaster's the ability to simultaneously broadcast four separate and independent programs on the same channel – which means that one channel 21 viewer could watch an educational telecourse on channel 21A while

another can let her children watch a children's program on channel 21B. Thus, multicasting allows viewers options that are user selectable.

The benefits of Digital Television are not only limited to viewers, but it is beneficial to WYCC as a station as well. To achieve the benefits of HDTV / DTV, the basic DTV design plan is key. At WYCC we plan to utilize the same standard that all of the broadcast industry is using [MPEG-2 4:2:2 P@ ML]. In doing this, we will insure that programming is routed throughout our facility in almost the same fashion computer files are distributed. Of course the above example of distribution is too simplistic and cannot be directly applied to the demanding architecture of a broadcast facility. However, despite the stringent requirements of a broadcast facility, video systems will be networked together, albeit in a much more complex manner. WYCC will utilize a compressed system that is built for networking and flexible enough to be used with both analog and digital systems. Compression will insure that a peer-to-peer network is possible. The system will also be backwards compatible and able to play the broadcast industry's legacy format [Betacam SP]. Thus, our upgrade to the new system will not leave us isolated to other stations that still utilizes the Betacam SP format. Once the facility conversion is complete, and we start using this technology, we will be able to produce more, faster (which in turn speeds up the process from concept to completion). This will save WYCC time, money and resources thus making us efficient and effective in delivering program content.

ESTIMATED COST OF CONVERSION

In order to be compliant with the FCC mandate, WYCC has been in the process of planning the needed infrastructure changes. We have already applied for our FCC DTV license and have been given channel 21 as our DTV channel. We have also initiated steps to insure that our conversion to digital is a smooth transition. However, WYCC, being a non-commercial educational station, is in need of massive DTV funding since it has no commercial sources of revenue.

Outside consultants who performed a Needs Analysis for WYCC have determined that our Digital Conversion will cost approximately \$10 million for our main facility (Master Control, Production and Post-Production) and we estimate that the transmission facility (Microwave Studio-to-Transmitter-Link, N+1 combined transmitter and N+1 Dual Adjacent Channel Antenna) will cost approximately \$2.6 million which equals a combined total of \$12.6 million. In regards to our studio facility, it is important to note that we are moving from our current location into the new Kennedy-King College that is being built on Chicago's south-side and will be ready for occupancy by WYCC-TV in 2003.

Thus, the State of Illinois funding is paramount to the WYCC conversion project – especially since (as of this date) congress has not appropriated funds that provide significant assistance to public stations throughout the country. The total of the three-year \$2.44 million of the state of Illinois appropriation being administered by the ICCB, will be used to fund the initial stages of the WYCC conversion – providing us a solid foundation for seeking further funding from other government and outside sources

22639

We have applied for a grant of \$2,643,400.00 from the Public Telecommunications Facilities Program (PTFP) to fund our transmission facility, such as our STL (microwave Studio to Transmitter Link), transmitter and broadcast antenna. Even if we are accepted as PTFP grant recipients, this does not cover other needed cost such as Master Control and Production conversion which is more expensive in comparison. As a result, even if we obtain the PTFP grant, other funding must be secured. Besides using our budgeted City College funds, we are pursuing any and all reasonable and qualified sources of funding.

Due to the intense planning, design work and funding needed, this time deadline is very short. As we move forward, the FCC's May 1, 2003 deadline is a constant reminder that time is literary "running out". After funding is approved, we still have to purchase equipment, according to City College of Chicago board rules, install the equipment as well as calibrate all systems.

The plan for WYCC's HDTV / DTV conversion has taken into account the immediate and future needs of the station. In doing so, we have created a cost effective, efficient plan that will insure that all systems are utilized to the full extent of their usefulness. With this conversion WYCC will be able to accomplish more, in less time and with a higher level of quality than in times past.
